Abstract
The new educations established at the Faculty of Agricultural Science at Aarhus University are not well defined disciplinary or professional educations, but what we call field oriented educations. Such educations are multidisciplinary by nature, and the graduates must be able to fulfil many different jobs in relation to the field in question. In field oriented educations there are special educational and didactic choices to be made regarding the content and delimitation of the curriculum. With research based, problem and case oriented teachings, the Faculty aims to build competences in research-like approaches to complex problems as well as in communication and cooperation across disciplines and perspectives.
**Table 1.** Overview of three types of academic educations: discipline-oriented, profession-oriented and field-oriented.
